

AT-HP Ankarmassa

AT-HP™ är en mångsidig ankarmassa med hög styrka. Nästan luktfri och därför även lämplig att användas inomhus. AT-HP™ är helt fri från styren vilket gör användandet säkrare. För infästning i betong, murverk och lättbetong. Montage sker med en standard 300 ml patronspruta.

Egenskaber

Material

- Ankarmassa av metakryl-typ
- Styrenfri och luktfri

Fördelar

- Montage i fuktiga hål är godkänt
- Färgförändring visar korrekt blandning
- Spänningsfri festsättning
- Förseglar det borrade hålet fullständigt
- Nästan luktfri

Användning

Monteras på

- Betong C20-C50 (Option 1)
- Sprucken betong C20-C50 (Option 1)
- Lättbetong
- Ihåligt- och massivt tegel

Användningsområden

- Gångstänger / pinnbultar M8 - M24
- Armeringsjärn Ø8 - Ø25 mm
- Stålkonstruktioner
- Skensystem
- Fasader
- Balkar
- Markiser
- Maskiner
- Balkonger
- Hyllor
- mm.

Fixation de sabot sur brique

Fixation de pied de poteau sur béton

Concrete :

1. The design loads have been calculated using the partial safety factors for resistances stated in ETA-approval(s). The loading figures are valid for unreinforced concrete and reinforced concrete with a rebar spacing $s \geq 15$ cm (any diameter) or with a rebar spacing $s \geq 10$ cm, if the rebar diameter is 10mm or smaller.
2. The figures for shear are based on a single anchor without influence of concrete edges. For anchorages close to edges ($c \leq \max [10 \text{ hef}; 60d]$) the concrete edge failure shall be checked per ETAG 001, Annex C, design method A.
3. Concrete is considered non-cracked when the tensile stress within the concrete is $\sigma_L + \sigma_R \leq 0$. In the absence of detailed verification $\sigma_R = 3 \text{ N/mm}^2$ can be assumed (σ_L equals the tensile stress within the concrete induced by external loads, anchors loads included).

Temperatur	-5°C	0°C	5°C	10°C	20°C	30°C
Arbetstid	45min	15min	12min	9min	4min	1min
Laddningstid	9h	4h	1h30	60min	30min	20min

Drilling methods

Solid brick/concrete	Percussion/hammer drilling
Hollow/perforated brick	Rotation drilling
Aerated concrete	Percussion/hammer drilling

Borra hål.

Rengör hålet med stålborste och blåspump (blås x5, borsta x4 och blås x5).

Indsæt en sihylse

Tryck ut massa tills strängen har enhetlig färg.

Stick in pinnbulten med en roterande rörelse och låt massan härda.

Fäst arbetsstycket och dra åt med rekommenderat moment med en kalibrerad momentnyckel.

Borra hål.

Rengör hålet med stålborste och blåspump (blås x5, Fyll hullet 1/2 - 2/3 op med klæbemørtel ved hjælp af pump fra bunden og udad borsta x4 och blås x5).

Stick in pinnbulten med en roterande rörelse och låt massan härda.

Fäst arbetsstycket och dra åt med rekommenderat moment med en kalibrerad momentnyckel.

Spacing, edge distances and member thickness - Concrete

Art. nr.	Spacing, edge distance and member thickness - Concrete									
	Effective embedment depth (8d) [h _{ef,8d}] [mm]	Characteristic spacing for h _{ef,8d} [S _{Cr,N}] [mm]	Characteristic edge distance for h _{ef,8d} [C _{Cr,N}] [mm]	Min. member thickness for h _{ef,8d} [h _{min}] [mm]	Effective embedment depth (12d) [h _{ef,12d}] [mm]	Characteristic spacing for h _{ef,12d} [S _{Cr,N}] [mm]	Characteristic edge distance for h _{ef,12d} [C _{Cr,N}] [mm]	Min. member thickness for h _{ef,12d} [h _{min}] [mm]	Min. spacing [S _{min}] [mm]	Min. edge distance [C _{min}] [mm]
